(54) Title: INSPECTION APPARATUS AND METHOD

(57) Abstract: Apparatus and method for the inspection of an object. A linear array of cameras are located in a stationery position with the object moved over them. An image processor first applies calibration and perspective alterations to the consecutive frames of the cameras, then mosaics the frames together to form a single mosaiced image of the object. An undervehicle car inspection system is described which provides a single image of the entire underside of the vehicle, to scale.
